If the subgoal starts with `forall <name>: <type>, ...` *then use tactic...?*

If the subgoal starts with `<type> -> ...` *then use tactic...?*

If the subgoal matches an hypothesis, use tactic...

Context

Hypothesis

```
intros <name>.
```

```
intros <name>.
```

All things we know to exist. These occupy the space above the ===== line in coq.

```
exact <hypothesis_name>.
```

A statement in the current **context**.

```
intros <name>.
```

```
intros <name>.
```
